

The New Whiting Reverse Taper Cupola Cuts Coke Costs Up To 30%.

- The solution to skyrocketing coke costs.
- Special reverse taper design reduces the amount of coke required per ton, increasing the metal-to-coke ratio.
- Efficient design saves coke by utilizing more centralized melting for more effective combustion.
- Heat loss through the shell and tuyeres is reduced.
- The metal shell has a longer working life.
- Shell replacement costs can be paid back in a matter of months. Not years.
- And, typically, you can save as much as 20-30% on coke costs.

Cut coke costs.
Produce more
cost-efficient iron.
